DermaCRYL™

DermaTECH'S Polyglactin 910 Suture

DermaCRYL™ Polyglactin 910 Suture is a synthetic absorbable suture made from a copolymer of glycolide and lactide (90/10). It is a braided multifilament suture coated with a mixture of polyglactin 370 and calcium stearate. It is available in sizes ranging from 8/0 to 1 and in a variety of needle types and lengths. It is supplied sterile in single use packages. It is non-antigenic and non-pyrogenic. It is absorbed by hydrolysis with minimal tissue reaction. It retains adequate strength for wound support for approximately 21 days.

Characteristics of DermaCRYL Polyglactin 910 Suture

- Polyglactin 910 is a 90/10 (1:9) copolymer of glycolide and lactide (90/10).
- Coated Polyglactin 910 is a mixture of polyglactin 370 and calcium stearate.
- Braided multifilament.
- Sterile and non-pyrogenic.
- Absorbed by hydrolysis with minimal tissue reaction.
- Retains adequate strength for wound support for approximately 21 days.
- It is absorbed completely between 56 and 70 days.
