DemeGUT™

Chromic Catgut Sutures

DemeTECH'S Chromic Catgut Sutures

DemeTECH's Chromic Catgut Suture is an absorbable, sterile, surgical suture composed of purified collagen derived from the submucosa layer of small intestine from sheep or goat of breeding or slaughter animals. DemeTECH Chromic Catgut is treated with chromium salts to delay absorption. It is supplied sterile and packaged individually. The packaging is designed to maintain sterility of the product until opened. The packaging will not withstand the steam/ethylene oxide sterilization process. Store in a cool, dry place. Avoid excessive heat. Do not use if package is damaged. Do not use after the expiration date. Discard unused portion. Handle with aseptic technique. Failure to observe these precautions may result in infection or lower reactions in vivo.

Characteristics of DemeTech's Chromic Catgut Sutures

- DemeTech manufactures its Chromic Catgut sutures with the highest quality collagen, maintaining a composition of the 99% of pure collagen.
- DemeTech's Chromic Catgut sutures are created in chromic salt to prolong integrity, minimize tissue reactivity, and minimize the duration of tissue reactions.
- Provide strength to retain for up to 14 days, and resorbtions as long as 21 days.
- Available in both undyed and dyed.
- Easy to carry your characteristics.
- DemeTech's new technology of chromicizing sheets minimizes the possibility of fraying and maximizes the predictable and integrity of its Chromic Catgut.

Tensile strength retained: up to 21 days	Monofilament	Complete Resorption
